email:aayushd@iitbhlai.ac.in

Collaborators Names: Santaz Sahithi(11940230) and Shubham Gupta(11941140)

Solution to question 2 :-

The graphs obtained after git checkout HEAD is as follows:-

In this graphs, after giving the command we can see that the HEAD moves to the parent commit of the current branch from which the git merge command was called.

So, Git resolves the ambiguity of where the head should go after the checkout head command by pointing the head to the current branch parent commit from the merge command was done
